

October 19, 1993

To whom it may concern:

We worked very closely with Douglas Reitmeyer and North American Construction Corporation (NACC) in the execution of a very technically complex cryogenic project that had to be designed and built to a very aggressive schedule! The cryogenic system we designed was a first of a kind, and it was necessary for us to work very closely with North American, who had overall project and construction responsibility. North American and their personnel demonstrated a great deal of competence in executing the project successfully. In addition to their management skills, it was obvious that they were competent in the technical aspects of the project and our equipment.

CCI Cryogenics has been designing and building cryogenic systems for over 25 years for many DOE projects at national laboratories including Fermi, Argonne, Brookhaven, Lawrence Livermore, etc., and in our experience, North American is the type of professional organization we prefer to work with.

Sincerely yours,

CCI CRYOGENICS

James E. West
